Alternative Core Network architectures

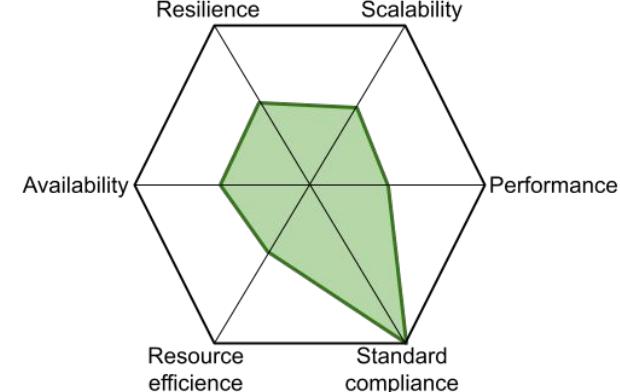

MobileStream

ECHO

Open5GS

Question: Which core is better?

How we can compare cores?

1. Select a common scenario
2. Stress the core
3. Get metrics and compare

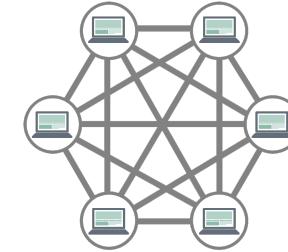

The tools were **different**.

How the core can be evaluated?

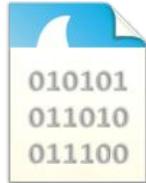

Real
Devices

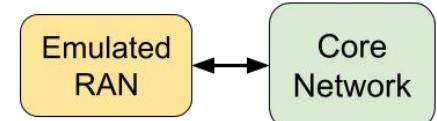

Simulation

Trace-driven
evaluations

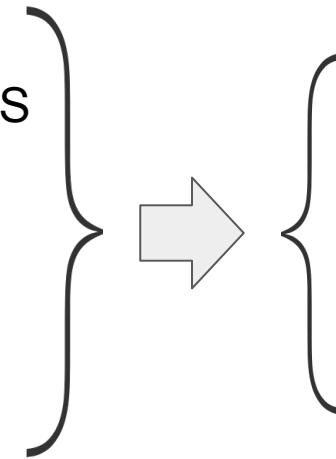

RAN
emulation

Limitations

- Limited number of UEs and BS
- Limited network patterns
- Limited scenarios
- Not standard-compliant
- Either 4G or 5G

Goals

- Scalability
- Flexibility
- Automation and programmability
- 4G and 5G standard-compliant

NERVION

Nervion: a cloud native RAN emulator for scalable and flexible mobile core evaluation
Jon Larrea, Mahesh K. Marina, and Jacobus Van der Merwe

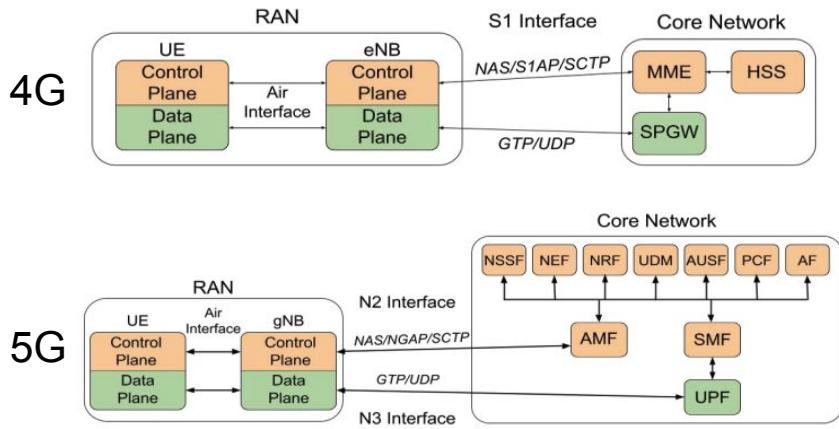

Nervion Overview

A *cloud native RAN emulator* that provides:

- Scalability:
 - Abstraction of the RAN internals
 - RAN refactoring
 - RAN element containerization
 - Orchestration with K8s
- Flexibility, Automation and Programmability (Reproducibility):
 - Nervion Scenario
- 4G and 5G standard-compliant:
 - Decoupling the RAN-Core interface

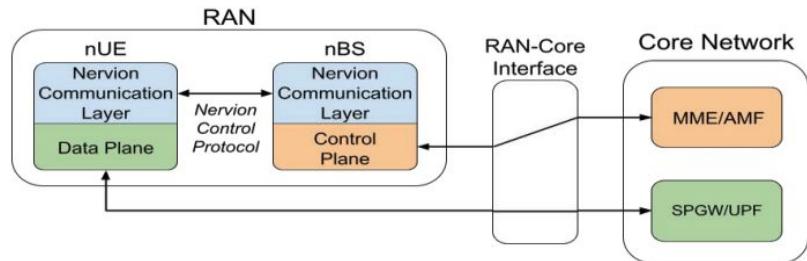

Nervion Design

Nervion Design

Standard Architecture

Nervion Architecture

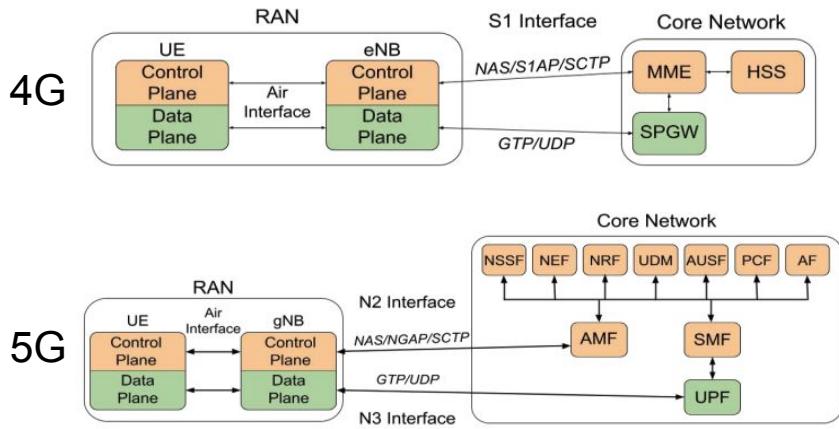

VS.

Nervion Implementation

- Python and C (15K LOC)
- Integrated in K8s
- 4G and 5G support

Nervion Scenario

<nBS List>:

- <nBS 1>:
- nbs_id: 1
- nbs_mnc: mnc
- nbs_mcc: mcc

<nUE List>:

- <nUE 1>:
- ue_mnc: mnc
- ue_mcc: mcc
- ue_msin: msin1
- ue_key: key
- ue_op_key: op_key
- control_plane: init-10-detach-5-attach-25
- traffic_command: ping -I {TUN} 8.8.8.8
- nBS: 1

- Programmability
- Automation
- Repeatability
- Flexibility

NERVION EVALUATION

14

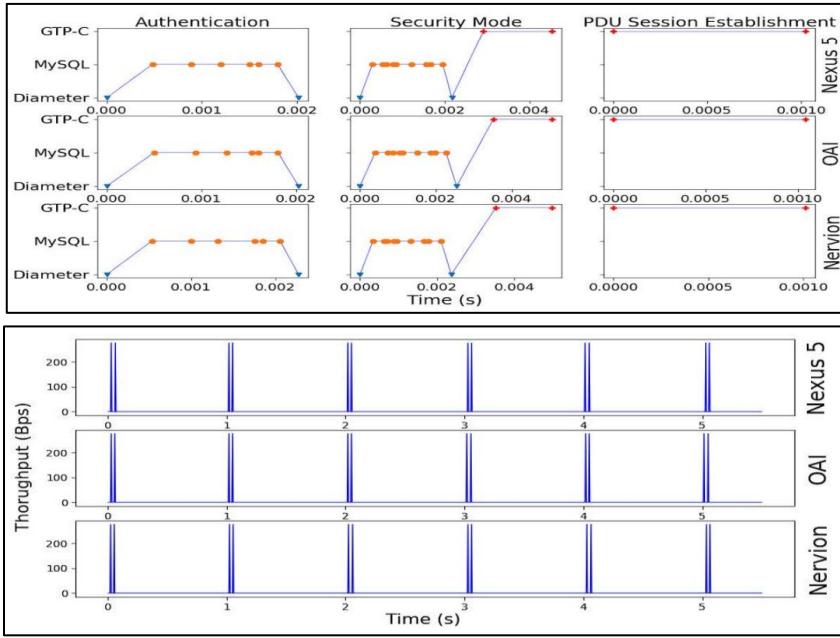

THE UNIVERSITY
of EDINBURGH

Nervion: a cloud native RAN emulator for scalable and flexible mobile core evaluation
Jon Larrea, Mahesh K. Marina, and Jacobus Van der Merwe

Nervion Evaluation: Correctness

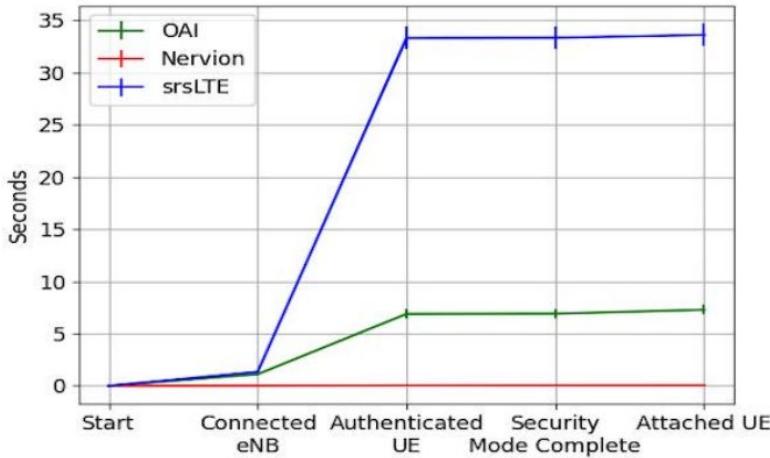

- “The effects inside the core network are the same”
- We monitored the messages exchanged within different core Networks (4G and 5G)

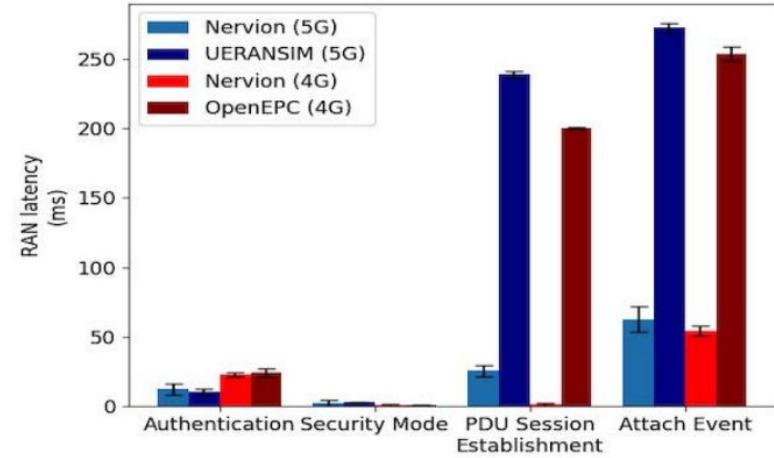

Open Source emulators

- Nervion vs. Comercial emulator
COTS UE

Nervion Evaluation: Efficiency

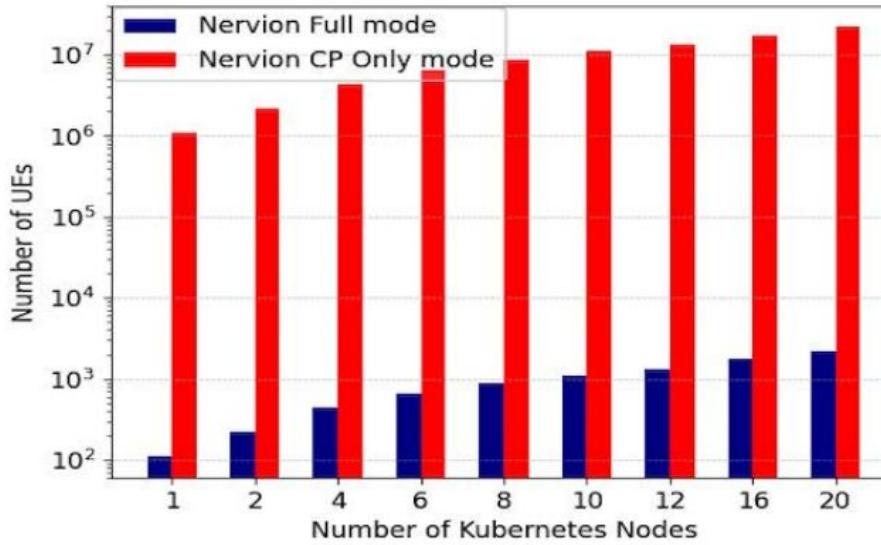

Nervion vs. OAI
srsRAN

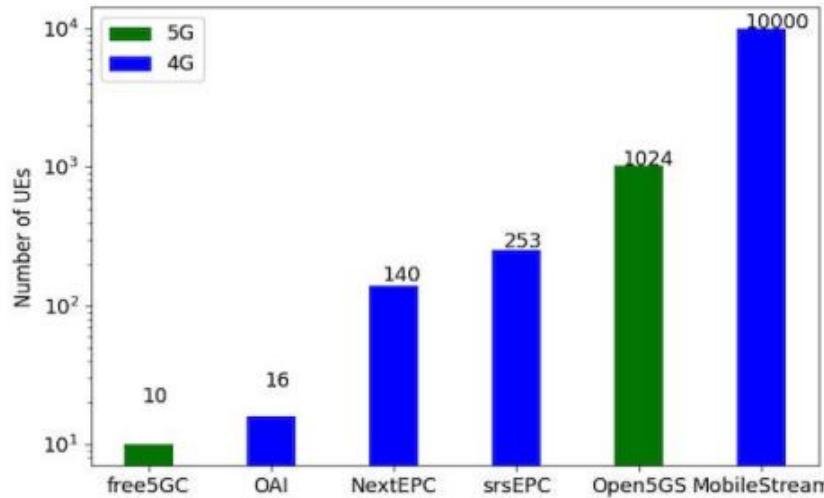

Nervion vs. UERANSIM
OpenEPC

Nervion Evaluation: Scalability

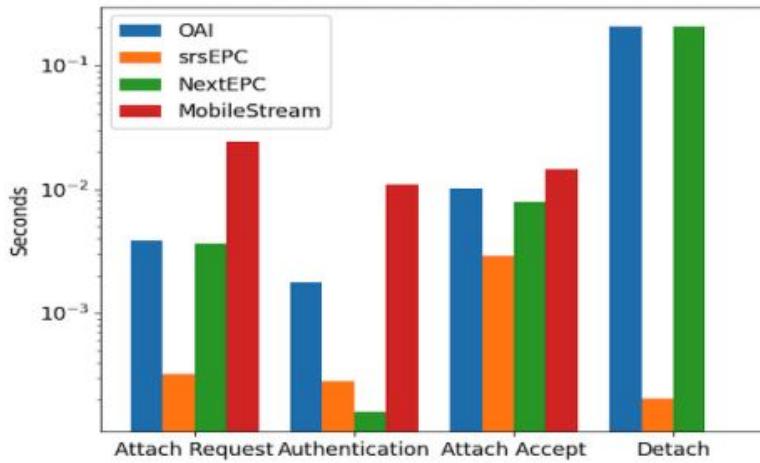

- Nervion Full mode (Data plane)
- Nervion Control Plane Only mode

Nervion Use Cases: Scalability comparison

Which core supports more UEs attached simultaneously?

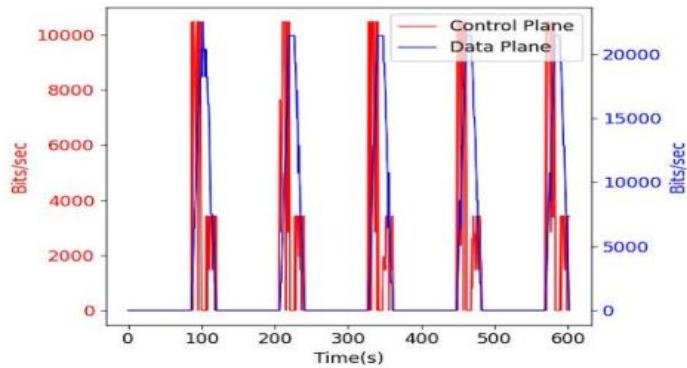

Nervion Use Cases: Latency comparison

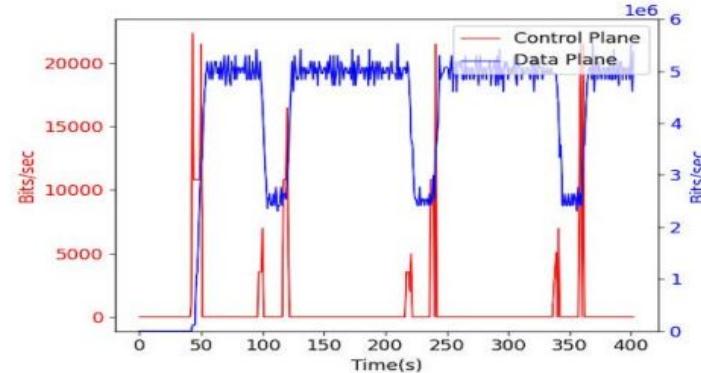

Which core supports has less response time (latency)?

Nervion Use Cases: Network patterns

IoT

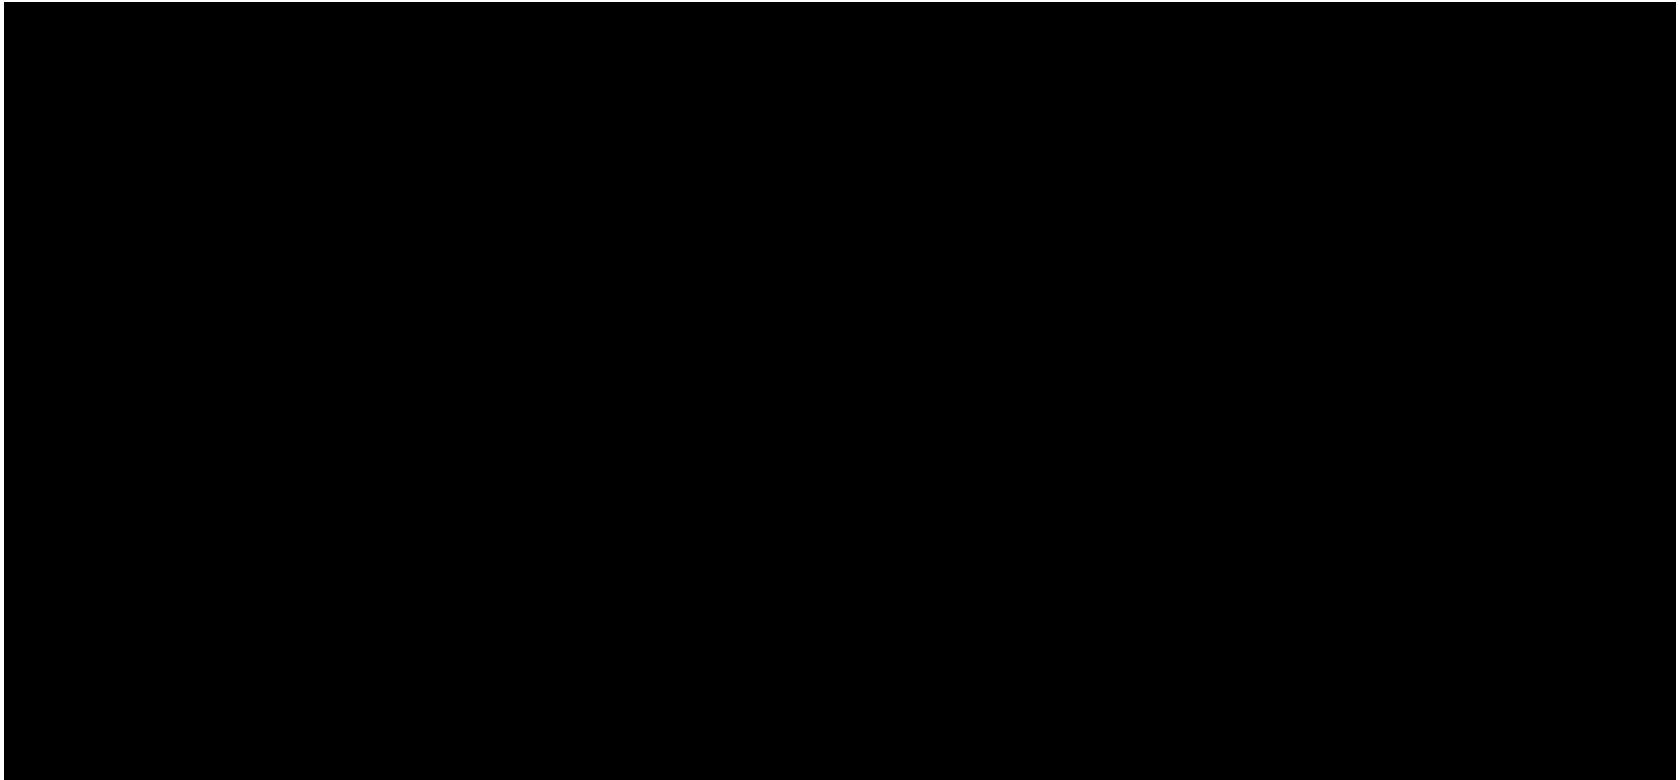

Mobile Broadband

VS.

Different control and data plane traffic behaviour (type of UE)

Accessing and using Nervion
