

# Set in Stone: Analysis of an Immutable Web3 Social Media Platform

Wenrui Zuo  
Queen Mary University of London

# Research Goal

Understand the interplay between economic factors and social activities on **web3** social media

# Why is Web3?

- Centralized platforms run the risk of being shutdown or blocked
- Alternatively, web3 platform can offer **decentralized equivalents** of well-known centralized services
- Web 3 platform underpinned by blockchain technologies
  - No centralized data ownership
  - No centralized censorship
- Users must **pay** cryptocurrency for social activities (e.g., posting, following)

# Research Motivation

## The risk of designing Web3 social platform

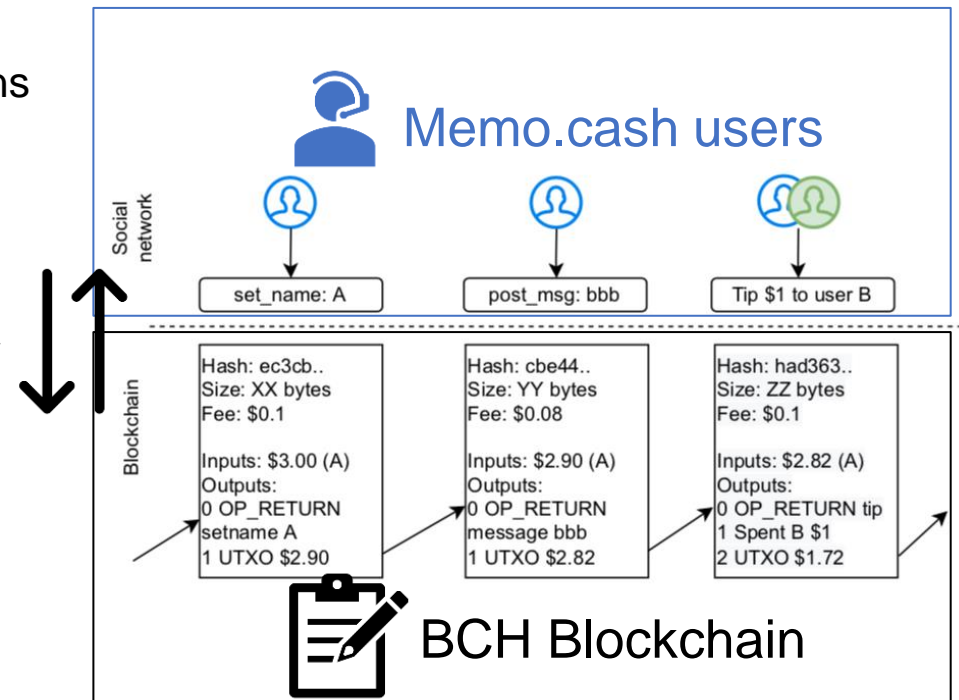

- Decentralization comes at a **cost**
  - Web3 shows a significant **inequality** among account wealth
  - User posts are shaped not only by social preferences but **economic considerations**
- Another inherent feature is **immutability**
  - Moderation system may fall short
- How **centralized** web3 really is

# Research Objective: Memo.Cash

## ➤ Data Collection

- A **crawler** developed to collect public data on memo.cash
  - extract all user identifiers listed
  - collect users' profile information
- Dataset including user **meta information**, **posts information**, and **transaction information**
  - Data spans from Apr 2018 to Oct 2021
  - 24.02K users, 317.8K posts and 2.57M transactions

**Permanent** and uncensorable data

# **Users Economic and Post Topics**

# Users Are Equally Wealthy?

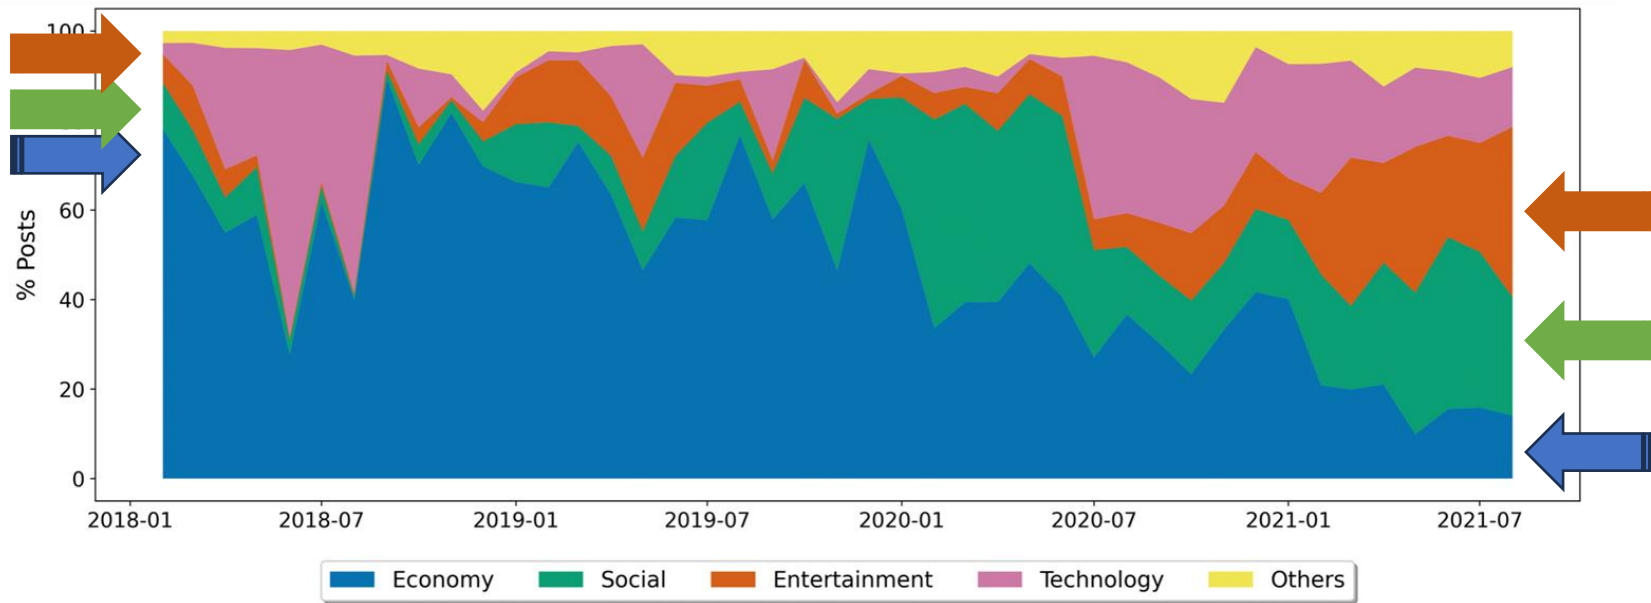

- A highly **skewed** wallet balance distribution
  - Top 1% of users owning 98.3% of asset
  - A **high Gini coefficient** of 0.99

This is particularly relevant, as memo.cash requires each social action to be paid for!

# Memo.cash is Blockchain Community?

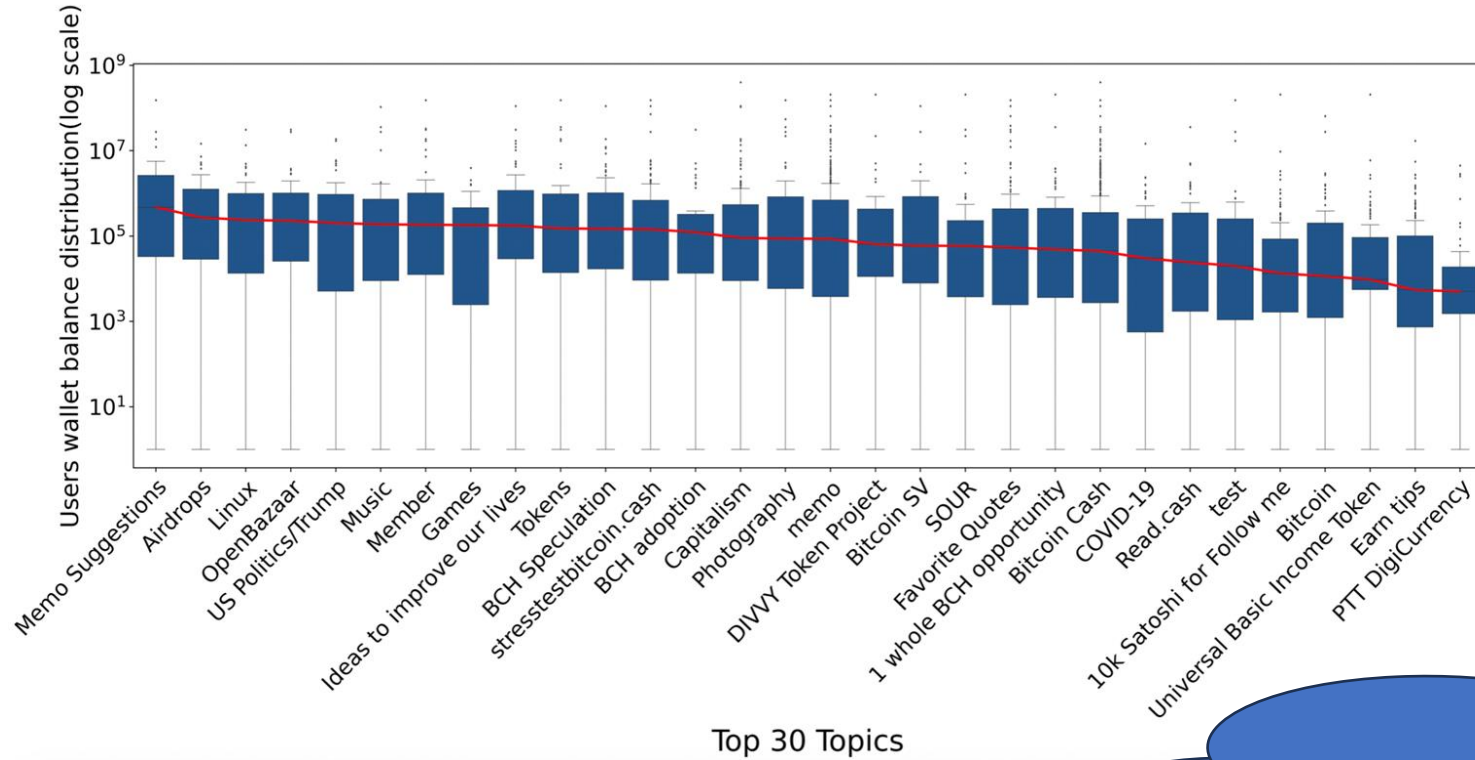

- Post can be tagged with a **topic**
- From 2018 to 2021, something changes
  - Economy posts **decrease** from 77.3% to 16.8%
  - Social posts **increase** from 6.4% to 24%
  - Entertainment posts **increase** from 8% to 17.1%

From a solely bitcoin to a wider forum!

# Does Users Economic Influence Following Topics?

|                                           | 20 Economic Topics | 10 non-Economic Topics |
|-------------------------------------------|--------------------|------------------------|
| <b>Mean</b><br>Wallet Balance (Satoshi)   | $5.4 \times 10^6$  | $1.5 \times 10^6$      |
| <b>Median</b><br>Wallet Balance (Satoshi) | 21,936             | 546                    |

Users more active in discussing **Bitcoin-related** topics, are similarly more active in **accumulating BCH wealth!**

# **Users Economic and Content Moderation**

# Is The User-controlled Moderation System Dominated by Wealthy Users?

➤ 7,987 unique domains making up for 92,853 URLs

- VirusTotal API
  - 6.5% malicious URLs

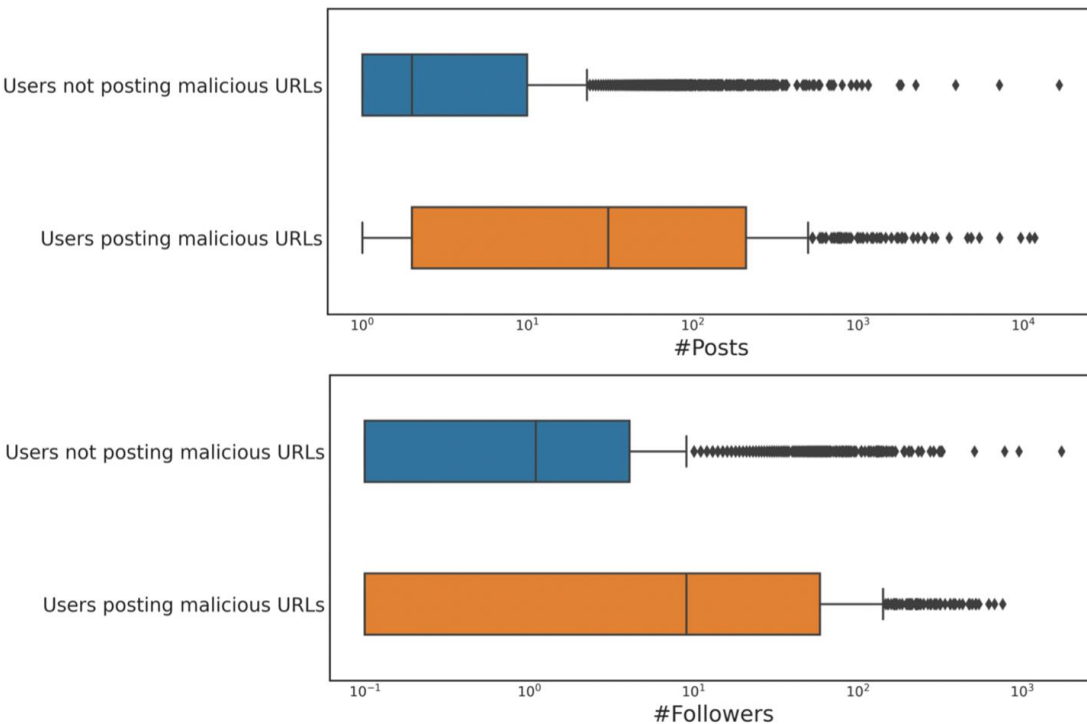

➤ **Persistent and immutable** Malicious URLs

- Users who shared malicious URLs have **greater social reach**

➤ **User-controlled** moderation system (mute)

- **Richer** users moderate more
  - Spearman Coefficient of the number of mutes VS. wallet balance(0.37)

User-controlled moderation system may fall short!!

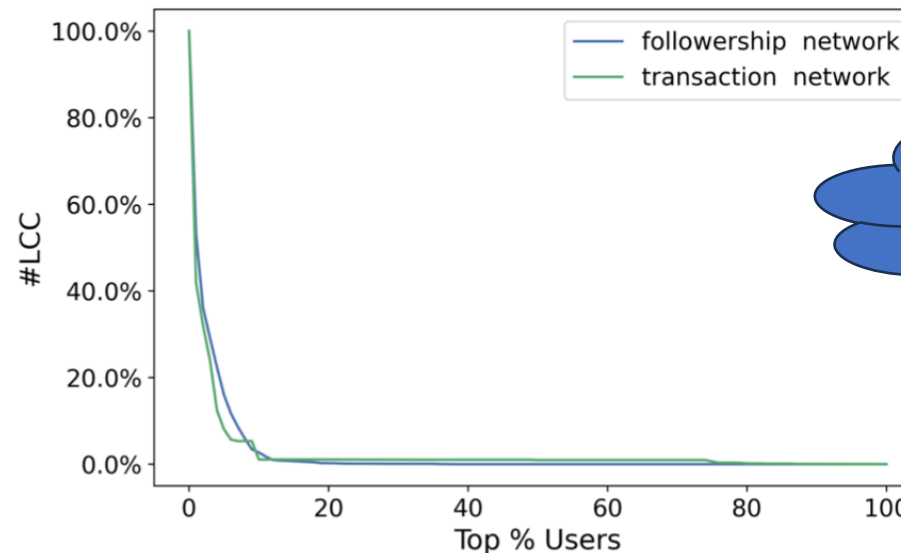

# How Decentralized Web3 Really is?

# How Decentralized Web3 Really is?

- The **top 3%** users are removed
  - 29.1% of the users remain in the Largest Connected Component (LCC) of the transaction graph
  - 23.9% of the users remain in the Largest Connected Component (LCC) of the social graph
- Both the social and transaction graph are **highly vulnerable** to the loss of users

A surprising degree of centralization on web3!

# Conclusion

- User posts are shaped not only by social preferences but ***economic considerations***
- User-controlled moderation system may ***fall short***
- Our findings indicate a surprising level of ***centralization*** on web3
- **Our research offers a new evidence base for researchers working in Web3, and flag key risks that must be considered!!**
